AICTE No.F.No. TN/NDIP/2009-10/018/3990 dt.20.07.2009 TNGS MS. No. 178 dt.11.06.2009

Date : 4/4/22

PORTABLE WATER SUPPLY AND OUTLETS FOR DRINKING WATER

Reverse osmosis (RO) is a membrane technical filtration method that removes many types of large molecules and ions from solutions by applying pressure to the solution when it is on one side of a selective membrane. The result is that the solute is retained on the pressurized side of the membrane and the pure solvent is allowed to pass to the other side

College has its own mineral water (RO) plant in the college campus. Entire college is supplied with the mineral water from the plant. It provides healthy and clean drinking water to staff and students. This water is provided to the classrooms, laboratory, hostel and mess.
